

## BETA 1228RTX Screwdrivers for Tamper Resistant Torx® screws, with handles

### Certifications and Standards

## Features

Designed to reduce fatigue and ensure high torque transmission even in the most demanding applications.

### HIGH TORQUE TRANSMISSION

The innovative tri-material handles with a rigid polypropylene core and double soft bits ensure effective and constant force transmission. Controlled deformation zones adapt to the palm contact points, improving thrust and clamping efficiency.

### CONTROL AND PRECISION

The ergonomic shape and designed index finger and thumb rests guarantee a firm grip and precise centring of the blade on the screw. Even with dirty hands or gloves, you achieve maximum directionality and safety during use.

### PERFECT GRIP AND ANTI-ROLL

The embossed texture ensures a reliable grip even under the most difficult conditions. The triangular profile prevents rolling on the work surface and promotes stable and continuous use.

### STRENGTH AND DURABILITY

The chrome-plated steel blade with sandblasted finish offers protection against corrosion and wear. The black phosphated tip ensures a precise fit with the screw and reduces the risk of slipping, prolonging the life of the tool.

### TRIMATERIAL STRUCTURE

The rigid polypropylene inner core is combined with soft, high-grip bits to ensure superior torque transmission.

### CONTROLLED DEFORMATION

The soft areas deform in a controlled manner, adapting to the point of contact and amplifying the thrust without fatiguing the hand.

### ANTI-ROTATION

The triangular shape prevents rolling on the workbench, improving safety and stability.
