

BETA 900BG/31 1/4" Morphos male square drive, with handle

Certifications and Standards

 UNI/ISO 3315 DIN 3122

Features

The Morphos 1/4" drive spinner handle offers precision, comfort and durability for professional screwdriving operations.

HIGH TORQUE TRANSMISSION

The innovative tri-material handle, with a rigid polypropylene core and double soft bits, ensures effective and constant force transmission. Controlled deformation zones adapt to the palm contact points, improving thrust and clamping efficiency.

CONTROL AND PRECISION

The ergonomic shape and designed index finger and thumb rests ensure a stable grip and precise centring of the blade on the screw. Even with dirty hands or gloves, you get maximum directionality and safety during use.

PERFECT GRIP AND ANTI-ROLL

The raised texture ensures a reliable grip even in the most difficult conditions. The triangular profile prevents rolling on the work surface and promotes stable and continuous use.

TRIMATERIAL STRUCTURE

The rigid polypropylene inner core is combined with soft, high-strength bits to ensure superior torque transmission.

CONTROLLED DEFORMATION

The soft areas deform in a controlled manner, adapting to the point of contact and amplifying the thrust without fatiguing the hand.
